FOR IMMEDIATE RELEASE
February 5th, 2007

Region4 announce a change in direction with a new exclusive agency for Teac Disc Publishing Products in Australia and New Zealand, and an end to their distribution of Rimage hardware products.

Region4 are today announcing an overhaul of their professional level optical disc publishing products, with the exclusive appointment by Teac America of distribution rights for their new range of Disc Publishing products, which incorporate the world's highest resolution thermal optical disc printer, throughout Australia and New Zealand.

Offering ground breaking capabilities into a broad range of duplication and publishing markets such as medical imaging, computer forensics, audio and video production, education, archiving and software development, Teac's new range of disc publishing products allow continuous production of up to 300 discs unattended.

"We believe that the success of our new Disc Publishing products is based upon finding an experienced partner capable of understanding the diverse requirements of today's optical disc production environments, and backing it up with quality support" said Les Luzar, Senior Vice President, Sales and Marketing, TEAC America, Inc. "We are excited about the opportunities Region4 can bring us given their intimate knowledge of the local markets gained over the last decade and their solid technical and sales abilities."

"Teac have a shared vision with Region4 in their new Disc Publishing products. Our established sales and support channel throughout both Australia and New Zealand and their industry leading technology will immediately place Teac machines into many mission critical on demand and high volume markets" says Callum Hingston, Managing Director of Region4. "While we are ending one relationship to ensure a common direction, adding a supplier of Teac's quality to our existing range of vendors including Primera, evocept and R-Quest allows Region4 to meet the needs of any of the extremely diverse CD, DVD and BluRay disc production requirements, up to and including the unmatched photo quality output of the Teac P55 printer."

Region4 have also announced that as of April 1st 2007, they will no longer distribute the Rimage range of disc production hardware, but will continue to sell consumables for that equipment. "It is important that we continue to support the installed base of machines in production environments by ensuring on-going consumables supply" Hingston says, "While we have developed a large installed

base in our territory we expect to see a significant increase in market share for our other vendors as Rimage's future direction moves away from the traditional markets we service."

About Region4

Region4 is the leading distributor in Australia and New Zealand for optical disc printing, duplicating and publishing solutions. Celebrating 10 years of operation in 2007, Region4 has developed strong relationships with the world's largest and most innovative manufacturers of CD,DVD and now BluRay and HD DVD printing, duplicating and publishing systems, providing the most comprehensive range of equipment to the market, via educated and knowledgeable channel partners.
