

BEFORE

AFTER

Creating quality thermal printed discs shouldn't be as difficult as climbing the Himalayas!

Restricted to printing black or colour with no true photo quality discs?
Impossible to get legible small text and graphic detail with low resolution print engines?
Muddy looking blacks that are printed using three different colours rather than real black?
Are your total costs of ownership pushing your cost per disc higher than you planned?
Getting tired of only having one autoloader option?
Expecting your printers to last longer under production conditions?

Well, that was BEFORE.

**Introducing the Teac P55 Dye-Sublimation Disc Printer.
Designed for Production. Designed to be Flexible.**

Industry leading 400dpi printing, 77% more dots per cm² - for greater detail in text and photos
Unique Dye-Sublimation capability - print true continuous tone photographs with stunning quality
Three different Teac autoloaders and many third party autoloaders available
Lowest cost of ownership of any Automated Thermal Retransfer Disc Printer

Four choices of ribbon: Black

VersaMax colour (CMY) designed to print on almost any disc

Colour (CMYK) with true black

Photo (CMYK) Dye Sublimation ribbon
